

Anti-Viral surface coating with permanent resistance to Coronavirus

Active Coronavirus which comes into contact with hard surfaces can survive for a number of days, and therefore facilitates the rapid spread of this deadly virus. This is a particular challenge on points of regular contact e.g. counter tops and push plates. As frequent contact with hard surfaces in all environments is inevitable, it is imperative to do everything possible to keep these surfaces free of active coronavirus.

What is AquaGrip+

AquaGrip+ is a high adhesion water-based paint product which exhibits excellent anti-bacterial and anti-viral properties and is tested in conjunction with Coronavirus to ISO 21702:2019.

AquaGrip+ is the perfect solution to keeping frequently contacted surfaces permanently free of coronavirus. It is extremely durable and ideal for use in hospitals, health centres, hotels, airports and train stations etc. Anything with hard surfaces including doors, counter tops, ATMs or medical equipment can be coated with this product creating a permanent defence against coronavirus.
